## TO WHOM IT MAY CONCERN

Al Bustan Zoological Centre are a private instetution in the UAE, located in Sharjah with an area spread over 24 hectares. We have in our research center more than 125 species and above 900 animals. With the climate being dry and humid most of the year, it's a difficult task to redevelop a natural habitat with the animal friendly environment supported by the best Life Support System, with priority for the safety and well being of our animals.

Keeping this overview in mind, we had appointed a company who has expertise in this field and moreover our priority was, respective works must be carried out keeping in mind all needs of our animals. Mr. John K Vengalil represented the company, and carried out all works from design to final handover. John's in depth knowledge about the subject be it designing as per animal habitat, behavior, safety of animals and keepers alike, and the Life Support System for them was like near nature and impeccable.

ABZC is impressed with the dedication of John and his team related to Zoo design, construction and its Life support system.
